Evening Brief

Date Stamp: Wednesday, July 19, 2017

Weather Summary

Weather:

Moisture will increase northward again into central and northern Utah and eastern/southern Nevada, keeping thunderstorm and rain chances high again today (Thursday). Most storms will be wet.

The wind threat shifts north on Thursday, with gusty winds expected across the central Idaho mountains and across portions of south central and southeastern Idaho. RH is forecast to reach critical levels across central and southeastern Idaho by Thursday afternoon.

Moisture will continue to surge northward Thursday/Friday into parts of southeast ID/WY. Lightning will return to the northern half of Nevada by this weekend and into ID by early next week. This lightning looks to be a mix of wet/dry and we will continue to monitor for lightning coverage, timing and moisture.

Preparedness Levels

Great Basin	4
National	4

Great Basin Fire Activity (from Irwin): Moderate Activity

New Fires and Acres: 31 fires for 629 acres. 9,777 acres large fire growth.

Resources:

- Crews: 19 T1 IHCs in GB: all committed.
 - T2 IMT (NWCC) – Goff is committed to Four Seasons Complex.
 - T2 IMT Team 4 – Roide is committed to Missouri Fire.
 - T2 IMT Team 5 - Bird is committed to Grass Valley Fire.
 - T3 IMT Team 3 - Uhlig is committed to MM155 fire.
 - Local IA resources are at drawdown for UT and NV.
 - GBCC has committed an estimated 105+ type 3, 4, 6 engines.
 - 0-T1 and 2-T2 helicopters are available in GACC.
-

Great Basin Fire Potential Summary

Fuels:

Fuels continue to moisten across southern and eastern UT, the AZ Strip and parts of Srn NV with the recent trend towards wetter showers and thunderstorms in those areas. ERC's are on the downward trend over these areas, especially UT and the AZ Strip with a more gradual decline over southern NV.

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, remain dry across the northern and western areas of the Great Basin with continued hot and dry weather. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs continue to increase and are above the 80th percentile in many areas. The mountains of Central Idaho have seen the most rapid drying of fuels with ERC's also approaching the 80th percentile. Ignitions and small fires have increased recently there, and continued dry conditions suggest that large fire activity is not far away.

Sagebrush live fuel moisture has been on a rapid downward trend the past few weeks in most areas, finally reaching near to just below normal mid-summer levels across the northern and western portions of the Great Basin. Thus with the live fuels dropping to these levels, combining with the very dry and abundant cured grasses, we have seen increased fire growth and in some cases extreme fire behavior. This is what we have been warning about for the past several months. Sagebrush live fuel moisture across Central/Srn NV/Utah has dropped significantly to below normal and in some areas is approaching record lows. Live fuel moisture will likely increase across southern Utah as monsoon moisture remains mostly in place.

We have issued a Great Basin Fuels and Fire Behavior Advisory for Nevada and Utah, available at the following link:

https://www.predictiveservices.nifc.gov/fuels_fire-danger/GB_Fuels_and_Fire_Behavior_Advisory.pdf
